

PRESS RELEASE

Kryptiq and InDxLogic Announce Industry Leading Document Management Solution *Partnership with InDxLogic Delivers Significant Enterprise-Wide Cost Savings and Efficiencies*

PORTLAND, Ore., and DALLAS, Texas, January 19, 2010 – Kryptiq Corp.'s Connect IQ® Document Management product is now integrated with InDxLogic automated document indexing and document and data management capabilities, creating the most comprehensive indexing solution in the industry. Kryptiq's new partnership with InDxLogic provides important cost savings and enterprise wide standardization to organizations that manually index their documents, allowing paper and faxes to be easily received and stored to an electronic database, such as a practice management or electronic health record.

"Rockwood has been using the powerful combination of Kryptiq and InDxLogic for the last 3 years and it has brought tremendous value to our Health Information Management (HIM) community," said Lyn Willett, Director HIM, Rockwood Clinics. "Our staff can automate the indexing and data management of scanned and imported documents into our electronic health record much more accurately, quickly and reliably than manual indexing alone, reducing our costs and increasing our efficiency."

By combining InDxLogic and Kryptiq Document Management capabilities, customers now have the best of both worlds and the flexibility to choose the indexing options that best fit their workflow needs. InDxLogic-enabled automated indexing, optical character recognition, and workflow and data management offers the ability to streamline workflows while Kryptiq Document Management's capabilities include explanation of benefits (EOB) indexing, front-desk scanning and management of documents outside of the Electronic Health Record.

"This integrated solution delivers substantial improvements in customer productivity while handling an ever increasing amount of patient information," said Luis Machuca, Kryptiq CEO. "The partnership immediately meets an essential need of our customers and will continue to help them manage their costs as their businesses expand."

"There is great synergy between Kryptiq and InDxLogic in this area of Health Information Management", said Michael Ebaugh, MD, InDxLogic CEO. "This partnership will result in significant advantages to the consumer and greatly expands our capabilities while allowing us to maintain focus on our core recognition, mapping and data acquisition technologies."

About Kryptiq Corporation

Kryptiq facilitates a first-of-its-kind, open collaborative network for healthcare that connects physicians with each other and their patients. Physicians and their staffs are using affordable and pragmatic technologies from Kryptiq to increase revenue capture, improve efficiency, and measure and enhance patient services.

More than 36,000 physicians use products in the Connect IQ® suite as part of this nationwide network to mobilize vital healthcare data. With Kryptiq's software such as secure messaging, patient portal, ePrescribing, patient revenue capture and document management, physician offices improve their patient communication and accelerate operational and revenue performance of the practice. About InDxLogic Corporation

InDxLogic's award winning software provides software and services to automate, data mine and standardize the indexing of documents and data to electronic health records providing health care organizations with significant short term ROI, enterprise wide standardization and the ability to capture data from unstructured data sources. InDxLogic is currently installed in many leading health systems throughout the country. These include Rockwood Clinic (Spokane, Wa), Trinity Mother Francis Hospitals and Clinics (Tyler, Tx), Associated Physicians and Surgeons (Terre Haute, IN), and Pediatric Health Alliance (Tampa, Fla). The InDxLogic service platform combines search technology with document indexing and point of indexing data mapping. InDxLogic document image recognition also allows customers to see the content of a document inside of the electronic health record (EHR) without opening the original image file. Use of InDxLogic can reduce indexing overhead costs by 60% within 60 days. Our software application has small financial and infrastructure footprint, significantly reducing barriers to implementation. For more information on the company, visit www.indxlogic.com.
