

## InDxLogic™ Introduces Automated Document Indexing Service To Help Healthcare Organizations File Documents and Reduce Staffing Costs.

### **Designed To Automate the Attaching of Scanned Documents to Electronic Medical Records**

*Dallas, Tx* - InDxLogic Inc., today announced the introduction of its patent-pending, automated document indexing solution to GE Centricity™-enabled healthcare organizations, that enables organizations to effectively attach all scanned documents to the patient's electronic medical record for significantly reduced cost.

Commenting on the release, InDxLogic President & CEO Michael Ebaugh, MD, explained: The promise of the paperless office is yet to be realized; physician offices are flooded with documents that must be scanned and then manually attached to the specific medical record to which they belong. By utilizing InDxLogic's automated document indexing services, our clients are able to greatly reduce their overhead costs related to manual document indexing while generating value from the information contained within these documents.

InDxLogic's indexing service automatically indexes both electronic and paper-based documents based on their demographic information (first name, last name, date of birth, other identifying date, etc.), document type and content. During indexing, the client retains full control of their documents. Once a scanned document has been indexed, indexing information is returned to the client for automated import into Centricity (formerly Logician™) EMR where the document and its descriptors are viewed by the provider within the patient's medical record.

InDxLogic uses secure encrypted HIPAA compliant proprietary protocols to ensure the integrity and the privacy of the scanned documents. Practices with existing document management systems can immediately and easily leverage the reduction in staff costs by joining the InDxLogic Remote Indexing Network™. Practices which have not purchased document management software will find the InDxLogic license cost to be about ten percent of the cost of the leading document management software solutions available today.

Combined with significantly lower staffing costs, InDxLogic remote document indexing is the solution that finally delivers on the promise of the paperless practice.
