

InDxLogic™ is an automated electronic document indexing and document management tool that completely automates the process of indexing and importing scanned documents, image files, and transcription documents into Centricity EMR™.

- **A Plug-and-Play Automated Document Indexing Application for Centricity:** InDxLogic is designed as a Centricity EMR partner application. This means it is tightly integrated with Centricity EMR making it easy to use and easy to configure. InDxLogic is the only document management software that is specifically designed to eliminate employee costs related to document indexing and importation.
- **Automated Indexing:** InDxLogic utilizes the Centricity EMR database for performing automated patient indexing, and identifying associated physicians and providers. InDxLogic utilizes the EDI model for electronic billing creating a revolutionary remote document indexing paradigm that completely eliminates manual indexing and importation after scanning.
- **HIPAA Compliance:** InDxLogic implements industry standard security features to facilitate HIPAA compliance. InDxLogic prevents unauthorized users from accessing documents and creates audit trails for identifying when and by whom documents were created, modified, viewed, or deleted.
- **Data Security:** InDxLogic Remote Indexing Network™ uses the same secure encryption technology that major banking institutions use to protect their data. Remote communications, file transfers, and personal health information managed by InDxLogic is encrypted using industry-standard 128-bit encryption and Advanced Encryption Standard (AES) technologies.
- **HL7 Compliant:** InDxLogic has a built in HL7 demographic interface that enables synchronization with an external EMR or practice management system.
- **A Scalable, Cost Effective Automated Indexing Solution:** InDxLogic is flexible enough to allow it to be used cost effectively in a small office and powerful enough to handle even a large organization's needs. InDxLogic is priced at one tenth of comparable systems and less than your FTE costs of manual indexing. *InDxLogic saves you money.*
- **Batch Indexing:** InDxLogic enables organizations to batch index scanned clinical documents and store them in electronic form. Organizations use InDxLogic in conjunction with their preferred scanners and software.
- **A Transcription Import Tool:** InDxLogic streamlines and simplifies the process of getting your transcription into Centricity EMR.
- **Document Storage and Off-Site Archive:** InDxLogic stores digitized patient records in a structured electronic database both on your local network and remotely providing secure off-site archival of your scanned documents. Records are indexed by patient so they can be easily retrieved at any time. Records are searchable by keyword, free text, by patient or by document type.
